Goltens Worldwide enters distribution agreement with Marine Fluid Technology for SEA-Mate® Products

Press Release

17 February 2025

Dubai, UAE – Goltens Worldwide, a leading provider of specialized marine services, is pleased to announce a new distribution agreement with Denmark-headquartered Marine Fluid Technology A/S (MFT) covering MFT's SEA-Mate® Blending-on-Board (BOB) system, SEA-Mate® Filter system and other SEA-Mate® products across key maritime markets in Singapore, Indonesia, India, the Philippines, and the Middle East, including the UAE, Saudi Arabia, Bahrain, and Qatar.

The SEA-Mate® Blending-on-Board system is a revolutionary technology designed for ship owners to RE-THINK their lubrication oil use by recycling and enhancing engine efficiency and reduce operating costs, enabling vessel operators to blend cylinder lubrication oil onboard. This provides results in optimized lubrication, extended engine component life, and significant reductions in oil consumption and emissions – critical factors in today's sustainability-driven maritime industry. The combination of the BOB and filter system provides oil cleanliness, eliminating the need for purifier which results in reduction of lube oil waste products. The effect provides significant energy savings and cost efficiency. In modern engines, the oil quality has become extra important, as the oil from the sump tank is also used as hydraulic oil for critical engine components, such as fuel oil valves.

Through this partnership, Goltens strengthens its position as a trusted solutions provider for shipowners and operators seeking to improve fuel efficiency and reduce environmental impact. The agreement aligns with Goltens' commitment to delivering innovative, high-quality solutions that enhance vessel performance and sustainability.

“Teaming up with MFT to bring SEA-Mate® solutions to our customers across these key regions is a privilege,” said **Sandeep Seth**, CEO of Goltens Worldwide. “The SEA-Mate® Blending-on-Board system is a game-changer for shipowners looking to optimize operations and reduce costs. This agreement further enables us to offer even greater value to our clients as they navigate increasingly stringent regulatory requirements.”

MFT

MARINE FLUID TECHNOLOGY

Having been at the forefront of developing advanced lubrication management solutions, the partnership with Goltens provides MFT with a strong platform to expand the adoption of its cutting-edge SEA-Mate® technology in some of the world's busiest maritime centers.

“Collaborating with Goltens, a globally recognized leader in marine engineering solutions, is a big bonus for us,” said Alexander Malt, Global Sales Director at MFT. “With their extensive market presence and technical expertise, we are confident that Goltens will drive significant growth for SEA-Mate® solutions, helping ship operators achieve greater efficiency and sustainability.”

The agreement is effective immediately, and Goltens is ready to support customers with sales, installation, and technical service for SEA-Mate® products in the covered regions.

About Goltens Worldwide

Goltens is truly global and a trusted partner of choice providing comprehensive engine and turbine services, bespoke in-place machining solutions, energy control solutions, afloat services and environmental and sustainability compliance solutions from 26 locations in 14 countries across the globe, serving more than 3,700 clients each year. <https://www.goltens.com/>

About Marine Fluid Technology

MFT is a leading provider of innovative lubrication and fluid management solutions for the maritime industry. Its SEA-Mate® product line is designed to improve engine performance, reduce operating costs, and enhance sustainability through advanced lubrication optimization.
